

About Me

Hello, My Name is Markevian Jones. I'm an Android Developer with a background in SCADA and industrial operations. I build modern mobile apps using Kotlin, Jetpack Compose, MVVM, and Firebase. My experience with real-time industrial systems gives me a strong foundation in automation, reliability, and problem-solving. I enjoy creating tools that help people and designing intuitive, scalable software.

About Me

Past

Starting discovering my passion and drive to program during Covid-19, Started looking ways to get into Programming and development through youtube. I tried learning basics and failed, This is when i discovered going back to school for my Degree in Computer Science and Development. I started my journey at Full Sail University of the People and have been learning and growing ever since.

Present

Today I am using my skills as a Developer to build Applications, Web Applications focused on Kotlin, Jetpack-Compose, and MVVM architecture. I am still learning to build reliable, scalable apps and enjoysolving complex problems through clean design.

Future

I am aiming and striving to expanding into cross-platform development and backend systems, aiming to create seamless experiences across Android,iOS, and web. As I continue to grow, I aspire to change my current role and career path and lead teams and projects that push the boundaries of mobile and web innovation.

Vision

My goal is to be able to gain and have a career change and to also lead projects that empower developers and businesses alike bridging industrial reliability with modern mobile innovation. My vision is to build teams and projects, while also mentoring and guiding the next generation of developers to create a better future for all.

Projects

Android Application Development

Built modern Android applications using Kotlin, Jetpack Compose, and MVVM architecture. Integrated Firebase for authentication and data storage, and implemented WebRTC for real-time communication features. Experienced in designing scalable mobile UI components and clean application architecture.

Web Application Development

Developed responsive and interactive web applications using React, JavaScript, TypeScript, HTML, and CSS. Implemented component-driven architecture, API integration, and deployed production-ready builds through Netlify. Skilled in UI/UX design and creating smooth user experiences with modern animations.

Mobile App Architecture

Designed clean, scalable mobile architectures with a focus on maintainability and performance. Applied MVVM patterns, modular design, and real-time data handling across Android applications.

SCADA & Industrial Operations

Hands-on experience monitoring, troubleshooting, and optimizing industrial automation systems. Worked with real-time data flows, control systems, and operational reliability in high-demand industrial environments.
